

SingleStream

Team 8 - 4.24.2017

John Fantell, Will Stone, Roshni Vachhani,
Ryan Flynn, and Robert Rotering

A person in a white suit is captured in mid-air, performing a high jump over a bar. The person's arms are raised, and their legs are bent, showing a powerful leap. The background is a dense, textured blue-grey, and the overall scene is dimly lit, emphasizing the white of the suit.

Music is the universal
language of mankind.

Henry Wadsworth Longfellow

SINGLESTREAM

MAKE STREAMING GREAT AGAIN!

Agenda

- Problem
- Solution
- Front-End
- Back-End
- Demo

The Problem

Being a fan of a wide variety of music can be a pain. Depending on the music player of your choice, not all of your artists may be available.

Global Streaming Market

- \$9.7 Billion Global Market by 2022
- Spotify, Apple Music, Pandora, SoundCloud
- Gained over a Billion users from 2011-2015

Current Options

- Different music options
- Different media formats
- Different Platforms

Google Play

The Solution

- A platform that unifies the content of each music streaming platform
 - Playlists can feature tracks from all supported streaming services
- Combines social networking with data visualization as new means to explore friends' playlist tracks, artists

How We Did It

Users/Stakeholders

- Those who:
 - Belong to subscription/cloud-based music services such as Spotify, Napster, etc.
 - Enjoy sharing music with their friends
 - Listen to media on non-mainstream music/media services (YouTube)
 - Want to explore new music

Functional Requirements

- User profiles (biographies, semantic playlist tags)
- Custom Playlists (all supported services)
- Auto-play
- Friends -> “Followers”/”Followings”
- Clone Playlists
- Music Data Visualization
- Responsive, Clean Design

Agile Project Plan

Sprint	Dates	Feature Description
• Sprint 1	2/16 -> 2/25	Create Mockups and Demos
• Sprint 2	2/26 -> 3/7	Get YouTube working for a base
• Sprint 3	3/10 -> 3/19	Incorporate Spotify API (Changed)
• Sprint 4	3/20 -> 3/29	Create Playlist functionality
• Sprint 5	3/30 -> 4/8	Add SoundCloud (Changed)
• Sprint 6	4/9 -> 4/23	Connect pieces and Clean code

Front End

Technologies

- Angular
- HTML5, CSS3
- Bootstrap
- Javascript 5/jQuery
- EJS (Template Engine)

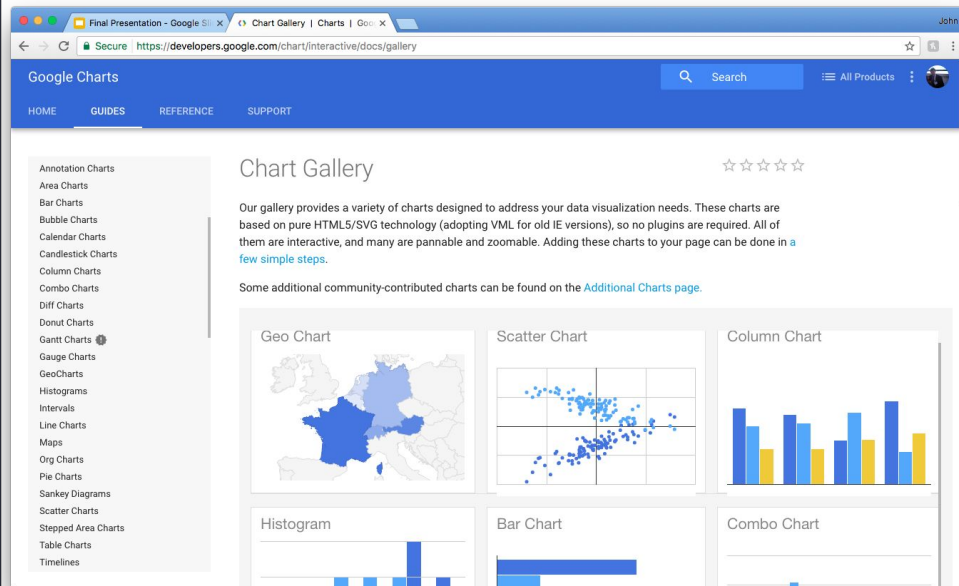

Team Members:

Will Stone, Roshni Vachhani

Google Visualization

- API
- Make variety of charts using data from backend

Back End

Mean Stack

- Node.js
- Express Framework
- MongoDB/Mongoose
- Passport

Team Members:
John Fantell, Ryan Flynn, Robert
Rotering

express

Passport

- Authentication middleware for Node.js
- Handles local account creation
- Assists with linking/unlinking subscription accounts

Backend Structure

- App: Routes, DB Schemas
- Views: HTML/EJS Files
- Config: DB, Passport, API Keys

app

views

config

User Schema

- Store followers/following information
- Refresh tokens
- Local authentication information
- Password Encrypted

```
local      : {  
  email    : String,  
  firstName : String,  
  lastName  : String,  
  password  : String,  
},  
google     : {  
  refreshToken : String,  
},  
napster    : {  
  refreshToken : String,  
},  
error : String,  
followers : [  
  {  
    _id: String,  
    name: String,  
    biography: String  
  }  
],  
following: [  
  {  
    _id: String,  
    name: String,  
    biography: String  
  }  
],  
biography: String,  
favorite_artists: String,  
favorite_songs: String
```

Playlist Schema

- Store user id
- Store relevant track information
- Store semantic tags

```
user_id : String,  
created : String,  
playlist_length : Number,  
description : String,  
tracks :  
  [  
    {  
      track_id: String,  
      channel_artist : String,  
      track_name : String,  
      url : String,  
      runtime: String,  
      source: String,  
      track_count: String  
    }  
  ],  
name: String,  
running_time: Number,  
playlist_count: String,  
tags: [String]
```

The Plan

API Technologies

- YouTube
- Spotify
- SoundCloud

API Technologies

- YouTube
- Spotify
- SoundCloud

~~Plan A~~

Plan B

API Technologies

- YouTube
- Napster

Constraints

- Flash must be enabled for Napster
- Adblock must be disabled
- Problems with FireFox

The Performance

What we Learned

- API Reliance - Uncontrollable
- Version Control - Important
- Determination - Essential

A low-angle, upward-looking perspective of several modern skyscrapers with glass facades, creating a sense of height and architectural scale. The buildings are dark, and the sky is a pale, hazy blue.

Future Improvements

- Number of available API's
- More robust Autoplay

Questions
